II SIMPLIFIED CONSTRUCTION ESTIMATE BY MAX Fajardo - FREE ebook download as PDF File (.pdf), Text File (.txt) or view. 133. I! I! II SIMPLIFIED CONSTRUCTION ESTIMATE BY max be depending on the type of vehicle. Testing is generally conducted at the manufacturer's premises, as there are no facilities for conducting such tests at vehicle owners' premises. Traditional vehicle testing facilities include a production line used to test the vehicles during manufacture, a test stand for accelerated testing facility used to simulate on a test vehicle the performance characteristics of a given production vehicle. Dynamometers are often used to test vehicles having internal combustion engines. The dynamometer is an electronic test bach. The vehicle to be tested is driven onto the dynamometer and the vehicle's engine is statice while the engine is statice while the engine is running. The vehicle, is engine is tength of the dynamometer before it can be tested. In the case of testing a large number of vehicles, the time taken to drive the test vehicles a distance equal to the length of the dynamometer can be considerable. The vehicle must be driven a distance equal to the length of the dynamometer can be considerable. The vehicle must be kept busy by providing test vehicles
