A: Unless I'm missing something, there are no more executable files on these discs. The only HL2 engine files on the disc are the ILOM/PNG files used by the Black Mesa mod. They're accessible via the Black Mesa SDK as `stuff/images/gametools/screenshots.png`. They're not currently recognized as data files on the disc, though. They don't show up when you extract the files from the CD. They're not included in the installation package. You can extract them, from the disc, with 7-Zip. Note that there were tools available from the game that would let you play the episodes without the client on non-steam-based systems, but they no longer work. If you're willing to have a copy of the disc mailed to you (for free), we can get you a link to the tools. What you've described should be available. A: I'm not sure about the first one, but the second has a copy of the source available for download. You can find it here (on archive.org): The game was released on the internet long ago (it was free for a while), but the game itself is easily downloaded from Steam and other platforms. The present invention generally relates to thermoplastic polyurethane elastomer compositions, and more specifically to thermoplastic polyurethane elastomer compositions that are suitable for use as transfer films in a transfer film method, and transfer film methods. Flexible, thermoplastic films are widely used in a number of applications, including use as overlay films for packaging materials. Such films may be used as gussets and seals in packaging materials such as bags, and often provide a shock-absorbing function. Flexible, thermoplastic films of polyester, polystyrene, polyamide, polyolefin, and polypropylene have long been used as materials for forming film laminates.

However, relatively rigid film, such as polyester or polystyrene films, usually have low tensile strength and low abrasion resistance. Thin films, such as polypropylene films, may be used as overlay films and may provide better tensile properties and abrasion resistance than rigid films
