System Requirements: System Requirements: Supported OS: Windows 8 and later System type: Any type RAM: 1 GB minimum Display: 1024x768 minimum HDD: 2 GB minimum Hard Disk Hardware requirements Minimum System Requirements: The following is the minimum set of hardware requirements for Windows 8. Some of these may be optional. However, most software may not work. For example, certain games, or may not run correctly, or the Internet may not function. Processor: 1 GHz or faster Operating system: Windows 7 or later Display: 1024x768 or better Storage: 500 MB of free disk space Display and Sound: Direct X 9 compatible sound card with support for DirectSound, or DirectSound . Monitor: 1024x768 minimum resolution, or higher Graphics: Compatible video card with a supported video card driver and display adapter, or later version Network: Broadband Internet connection. Broadband Internet service is not included. Internet browser: Internet Explorer 8, Chrome, Firefox, or Safari 9. The following minimum versions of the web browser will work: Internet Explorer 9, Chrome, Firefox, and Safari 9. Additional Requirements: VMware Connection 4 (latest version) All editions of VMware vSphere ESXi (latest version) All editions of VMware vSphere ESXi and vCenter Server (latest version) VMware vSphere client (latest version) Included in the evaluation: vCenter Server, plus licenses for the VMware Networking and Security products vSphere ESXi Hypervisor vCenter Server Standard Access to the .Q: Alternative to MPI for parallelizing string operations in Scala? I have a very long string which I need to find the first occurrence of a sequence of string tokens in it. This string is a huge json string and I need to find that token first time it is used in that string. I am using Scala and I have to get this result as fast as possible. I am not using any optimization methods because I am also interested in the learning experience here. I thought of using parallelism to make this process faster. Are there any other alternatives to MPI? I have never heard of MPI and only limited Scala knowledge. A: A rather naive approach would be to split the string on the token(s) and for each chunk search through the string for the first time it is used. Something
