When I search the Internet for explanations, it seems the consensus is that the Earth is accelerating. Why would that be? I have only a very basic understanding of physics, and I don't understand what it is that is accelerating. A: It is not the Earth that is accelerating. It is a phenomenon called inertial frame dragging. You can find an explanation of this at In fact the Earth is slowing down. But it has nothing to do with accelerating. It's acceleration is in the Z direction. Not in the X and Y directions. It's rotation around the Z axis causes it to accelerate in the X and Y directions.
