"Easy to find your bookmarks in seconds thanks to the search function and tagging system. These are just a few of the reasons that Savory is the best way to organize your bookmarks..." Goals: "Simple... [you] don't have to think much about how the list of bookmarks is organized." And these are some of the reasons that Savory is the most minimalist, easy-to-use bookmark manager for Google Chrome. A few months ago I changed the way I organize my bookmarks. Prior to that, I was using the default bookmarks manager that comes with the browser. However, having a ton of bookmarks saved on your computer becomes a struggle to find something. Finding the bookmarks I was looking for, for example, is not an easy task. So, after a while I opted for the method of having a variety of bookmarks saved under different folders. I simply keep the ones I really need to refer to in the folders I want them to be found. While that was quite effective, it did not provide the pleasure of having everything neat and organized. Having a ton of bookmarks saved in folders that I can't refer to in the most effective way was not that helpful. That was until I found Savory. Features: Aside from being a simple and efficient bookmark manager, Savory has some great features. Let's take a look: Search function: Instead of having a ton of bookmarks saved all over the place, now I have them neatly categorized in folders. When saving a link, I simply tag the bookmark with a keyword that is most likely to refer to the bookmark I was trying to save. This allows me to find the bookmark I was looking for in seconds. For example, if I wanted to find all the web pages that are related to earthquakes, I can simply search using the keyword earthquake. The search function can only be used for newly saved bookmarks. However, that does not come as a negative fact. Savory's most significant feature is its search function. Well, that and its efficiency. This isn't to say that the extension is not organized well. For example, Savory allows you to sort your bookmarks based on various criteria, such as when they were saved, if the bookmark was created by someone else, or if it's a web page or a picture. How to find
