Systems Optimization Automatic cleaning of Windows startup Erase Cookies Norton will automatically clean the temporary files to keep things fast and clean! System Registry Cleaning Norton will clean out the registry to keep your PC running faster and cleaner! Automatic Disk Cleaning Norton will automatically clean out the unused and corrupted files to keep your PC running faster and cleaner! Unnecessary Floppy Cleaning System Requirements OS: Any Windows installation Memory: 1 GB (64-bit) or 2 GB (32-bit) RAM: 2 GB CPU: 2 GHz Hard Drive: 500 MB is recommended Download WinRAR supports many different archive formats and can open many files types with ease. It can either compress or decompress and create or extract many archives with ease. Additionally, it includes more than just an archiving tool, but also includes an archive manager which can rename and preview files which are contained in one or multiple archives. WinRAR provides more than just an archiving tool, but also includes a powerful text editor, allowing users to modify the text of archives as well as view and change the file attributes of their contents. To begin with, you need to make sure your computer meets the system requirements needed by this application before downloading it onto your hard disk as it will take up considerable space and RAM. The setup offers to install some additional tools that can help you further optimize your PC, so you can use the trial period to evaluate them as well. The interface displays all the tools included in the software, and users can start by performing an in-depth analysis of their system and locate registry and Windows errors that hinder smooth PC functioning. Due to the complexity of the scan, the task takes some time to complete, but identifying, and later fixing, the faulty areas of the PC will be worth the wait. Another method of boosting PC speed is to monitor it for a while, then apply changes where needed. Norton SystemWorks can keep track of the status of your disks, CPU and memory usage, as well as network speed, notifying you when the values it records are too low or too high. Computers are often slowed down by the large amount of obsolete and unnecessary data they store, such as cookies, cache, history and temporary files, and it is recommended to use Norton SystemWorks to erase them on a regular basis.
