Screenshots: Is histone demethylation responsible for the state of transcriptional repression induced by histone deacetylase inhibitor treatment? Acetylation and deacetylation are important post-translational modifications of the histones that regulate the accessibility of the chromatin for the action of transcription factors. This post-translational modification of histones is reversible, allowing the removal or the addition of acetyl groups to be a mechanism for controlling gene expression. Is there? And if there is, what is it? A: With native arrays or objects var arr = [undefined, "value"]; var obj = { }; arr.forEach(function(v,i){ obj[v] = i; }); console.log(obj); if(arr.length > 0) { console.log("Not undefined or empty"); } You can convert an object into an array by calling Object.keys(obj).forEach(function(key, index) This method includes all enumerable own property names, which means that undefined and null are excluded. A: You can use Object.keys(): var obj = { }; Object.keys(obj).forEach(function(key) { if (key!== "") { console.log("not undefined or empty"); } else { console.log("empty"); } }); See also you for being so nice." "I am so sorry." "Listen, I know I'm still pretty new in all this." "But can I ask you a question?" "Sure." "How long do you plan on keeping that going?" "As long as it takes." "I love you." "I love you." "Are you talking about Star, here?" "Yes." "He's right." "Then I guess you're gonna have to keep that going for the rest of your life." "Are you kidding?" "I know that this is a big change for you, and I want you to know that I'm right there with you." "And I will never leave you, ever." "And I promise you this:" "If you ever want to talk about it, I will listen." "I promise." "You're a great friend." "You're a great friend." "Oh, my God." "What am I doing?" "Ellen, I don't think I'm the kind of man who can be with a woman like you." "What are you saying
