nSpaces is a simple software that allows you to switch between user-defined spaces. Here, you will be able to save your position (left or right), enter a password, and change settings, among others. nSpaces has a user-friendly interface, but its features still need some work. For example, if you set a shortcut to instantly open nSpaces, pressing Alt and the left or right arrow keys will still open the program. Furthermore, some keyboard shortcuts are overwritten by the app, and some global keys like Ctrl + Alt + Del will either be disabled or redirected to Windows Task Manager. Version 1.1.1.0 doesn't include any major changes, but it does have some minor issues. We observed some bugs where nSpaces would either show the desktop wallpaper (after switching to another space) or not show the list of recently accessed documents. Unfortunately, some design choices (e.g. some undocumented features) hamper the final results. Still, nSpaces is a promising start for more advanced users who require a tool to simplify multitasking. nSpaces Screenshot: nSpaces Download Link: AeroFix AeroFix is a utility that fixes a number of Windows issues, especially those connected with the Aero window theme and the top-right system tray menu. Moreover, the tool supports a number of languages like English, Spanish, French, Italian, and Portuguese. Besides that, you will be able to quickly reboot the computer with one click and restart the process with the help of a feature that requires you to enter the current password. AeroFix is able to detect the specific Windows version being used and prompts you to instantly correct whatever issues you may notice.
