An open source based system will enable us to leverage the expertise of many programmers to produce a high quality application. The intention is to make AutoCAD a truly open source platform. The changes to the product between a new version and the last major version are referred to as "feature changes". Between a major release and a minor release there are "feature changes" or changes to the "build" number. For example, between AutoCAD LT6 and the current release, AutoCAD LT6 (build 4434) there are no feature changes. Autodesk will also build a new AutoCAD as a major release with each new release of AutoCAD LT (build 4435). There will be many changes to the product over time and there will be many build numbers.
