PowerPoint is a presentation application that is able to import graphics, either as images or from a variety of other sources, such as clip art or graphics. PowerPoint supports a variety of fonts, colors, and text. It also has its own set of built-in commands that enable you to easily add, modify, and remove things such as slides, tables, and SmartArt graphics. PowerPoint uses a very simple layer system that enables you to edit different areas of the screen. The layers are much like the layers in Photoshop, and you can drag any element onto or off of any layer. But you don't use Photoshop to paint on a PowerPoint slide — you create the slides in PowerPoint. To add graphics, you drag the Graphic icon onto the slide where you want the graphic to be displayed. PowerPoint's built-in slide layout system enables you to quickly create nice-looking slides. You can manipulate the slide layout through many built-in features, including standard buttons and the toolbars, shown in Figure 6-4. PowerPoint is a very useful tool for both beginning and experienced designers. **Figure 6-4:** The Slide Show tools enable you to make slides very quickly. PowerPoint supports a wide range of themes. The themes are clean, casual, and very professional. Themes are in a two-level hierarchy: themes and preset themes. You can customize individual themes or create a new preset. PowerPoint also lets you go deeper, and create a
