This application allows you to freely draw on graph paper using your computer. It provides basic drawing tools for creating sketches and drawings. The interface is clean and simple, comprising the main menu and all the available drawing buttons, but most of it is occupied by the drawing board. All you have to do is select the tool you want to use and unleash your creativity. Among the available drawing instruments, you can find the 'Freedraw' tool, which you can use to draw on the board freely. You can also insert radial or continuous lines, rectangles or circles of various dimensions, as well as text boxes. The brush color is customizable, and so is the line thickness or the grid transparency. However, adjusting them is a bit annoying, as you have to press the '+' or '-' buttons to do so. Another drawback is that the eraser dimension cannot be adjusted. Work in a safe environment The software comes with unlimited undo support, so if you did something wrong, you don't have to worry, as you can turn all the way back to a blank drawing surface. However, this might take a while: each time you press the 'Undo' button, the application allows you to view all your actions so far, just like in a video, and eliminates the last one. Once you finish your drawing, you can print it or save it to your PC for later use in DG2 (DigiGraph project) or BMP format. Designed with simplicity in mind, DigiGraph is a handy tool, especially for game developers who often need to use graph paper to design maps and sketches. Or you can use it to simply print empty graph paper using a high-quality printer and thus save some money. The present invention relates to a process for hydroforming an internal rib for a tubular part, particularly a wall of a bicycle frame, having a section having a circular cross section and a section having an oval cross section. Tubular parts, particularly bicycle frame walls, are conventionally formed of components, typically of metal. The tubular parts are shaped into their final form by rolling, extrusion, injection molding and the like. The conventional techniques for forming the wall of the tubular part generally have limitations as to the form of the part, particularly when the wall of the tubular part is formed of a complex shape or includes one or more internal ribs. Another conventional process for forming the tubular wall of the frame includes shaping a metal blank into
