file.Q: In R/Shiny, how to change the visibility of a component based on the action of another component? Here is the minimal code to my issue. I am trying to call the `dataCheckPdf(command="test", page="a")` function on page a after clicking the button "Test". The background of the page "a" changes its color but the components in the page "a" do not disappear. The result is that the color of page "a" is changing, but not its

components. Obviously,
there is something I've been
missing but I don't see it...

functional media folder.. If
you have also installed
iTunes it will make a copy of
your Windows media folder
and install files into your.

5.6.0 (Easily Applicable Graphical Layout Editor - Win) [m.The House, led by Reps. Anthony Gonzalez (R-Ohio) and Barbara Lee (D-Calif.), unanimously passed a non-binding resolution Tuesday to support transgender people in the military. Though this resolution is not a major legislative advancement, if it's signed by President Obama, it would be a significant achievement for transgender rights. Gonzalez, Lee's counterpart on the

House Armed Services Committee, has worked for several years on the resolution. He says that with more than 100 House cosponsors and growing national support, the time is ripe to officially recognize transgender people in the military. “It’s great to see that leadership on the part of both parties,” Gonzalez told BuzzFeed News. “This is something that the Department of Defense should have done years ago.” Gonzalez said House

leadership worked with the Office of Management and Budget (OMB) to ensure it would be a timely and effective resolution, and that the wording is broad enough to cover the broadest transgender population in the military. The resolution aligns with guidelines the Defense Department is already providing for transgender service members. “The issue of transgender service is a complicated one,” Gonzalez said. “What I know as

someone who was on the Armed Services Committee, we're trying to figure it out."

Another bill aiming to formally recognize transgender Americans in the military is headed to the Senate, where Sen. Kirsten Gillibrand (D-NY) is the point person on the effort. In a statement to BuzzFeed News on Tuesday, Gillibrand said that Lee is "tireless and resilient" in her work on transgender rights. "I have been with her many times as she has stood strong with

members in this House who have been attacked, and I am proud that she and other members are working to end the outright discrimination that continues today,” Gillibrand said. “I believe that the administration cannot ignore this issue and instead must change its path. We cannot afford

Researchers from the University of Georgia (UGA) and the U.S. Department of Agriculture have begun testing a new device that will allow farmers to inspect and remove wheat ears without damaging the crop. The

research was funded through a three-year cooperative agreement between USDA's Agricultural Research Service and the UGA's Institute of Food and Human Nutritional Sciences. "Wheat ear removal is an operation common to many farmers," said Stephen Rice, associate professor at UGA's Institute of Food and Human Nutritional Sciences and a co-investigator on the project. "The use of handheld electrified sensors that can quickly and accurately

identify and remove wheat ears while leaving the remainder of the plant untouched will help farmers reduce the expense and downtime associated with this task." The combined research focuses on developing and testing the accuracy of a handheld sensor that can quickly identify wheat and eliminate it from field crops while leaving the rest of the crop intact. Team members from UGA and the agency's Agronomic Research Service

in Athens, Ga. developed and tested the sensor as part of a 13-year, \$2.9 million partnership with the agency to improve methods for monitoring, selecting and integrating crop inputs to increase wheat yields. Scientists with the project have been developing, testing and validating a sensor that can detect, locate and identify wheat and wheat hybrids from a distance. Researchers note that the sensor uses a single emitting electrode to

simultaneously detect the presence of wheat and differentiate it from similar-looking grains, such as oats, while another emitting electrode identifies specific wheat hybrids. "Our study shows that this visual sensor can accurately identify wheat ears and discriminate between wheat and other grains found in fields," said Paul Allen, who oversaw the research and is now technical program leader for field sensing at the Agricultural Research

Service's Southern Crop Protection Research Initiative. The researchers have developed and tested a small, handheld device that can quickly and accurately detect the presence of wheat ears in field crops. The sensor, which uses a single emitting electrode to detect the
