How to Use Photoshop's Layers Photoshop's biggest selling point is the use of layers, overlays and transparency. Layers are essentially bitmaps that are placed, usually in a stack, over the image, which enables the user to add detail and change the color, lighting or size of an image at any time. Different layers can be processed independently, merged, removed or even overlaid on top of one another. Layer groups can be created, which are essentially a way of managing which layers are active at any given time. Overlays are essentially bitmaps that give color or control to the images, adding lighting, sepia or other color effects. Transparency allows for transparency of areas that are merged and gives the layers a translucent appearance. This is very helpful for adding effects such as stencils and text, and more. To get the most out of Photoshop, you need to have a good understanding of what you are going to be doing before you start editing. The first step is to get familiar with what you want to have happen in your photo or image. Make a list of everything that you need to change. Are there any objects or colors that you need to add? Are there areas that you want to darken or lighten? Also, keep in mind that you may want to add objects that you will later remove. 2. Start Up Your Edit Tool Photoshop has various tools that you can use to make changes to your photo. If you are used to a different editing program, Photoshop may have tools that look similar but are slightly different in their functionality. Photoshop's main tool is the "Edit" or "Photoshop" tool, which is the circular selection tool. The "Edit" tool is made up of three main pieces: the dotted line that you use to select areas, the brush icon (where the user picks a color for the selection) and the different selection tool options. Picking the brush is fairly simple, as you simply click with the left mouse button to select a color and then click again to select the object that you want to apply that color to. Using the "Edit" tool, you can select an area of an image by clicking anywhere on the image, and then

I have a Eclipse project which was created by someone else. I'm trying to run this project from the command line. However, although it was created with the Eclipse plugin, the project itself does not contain any Eclipse-related dependencies or even structure. It looks like the other person created the project with a command line tool and just copied some files to the folder. How do I do the following: Import the project to the compiler (i.e. to remove all the folders with.settings and such that are present in other places in the project) Compile the project from the command line using Java EDIT: Just to make it clear, I am not asking how to install Java in the first place. I have a working Java installation, and I'm not trying to reproduce any Eclipse setup. I just need to recompile the project from the command line. A: I would suggest to create a new empty project and paste the sources of your existing project into that. I think it will be much easier to work with that way. Then, add the dependencies (jars) you need, maybe also the build.xml if it is not there yet. Afterwards, run the ant task

Bayern Munich come out victorious in their 3-0 thrashing of Mainz at the Allianz Arena and they have gone into the international break on a high note. Blues boss Niko Kovac was pleased with the performance of his troops and was particularly happy with the victory over Mainz. "After the game, I spoke with the players and with the staff. We were very well prepared for this game. So, I was very pleased," Kovac said. "I was much more pleased about how we won than about the amount of goals scored. Bayern Munich are a great side and we know that the players will come back to this great team." After the match, the 25-year-old, who is getting a lot of media and fan attention in his new role, went into further detail. "It was a great game, the boys played their best and the fans showed their support. It's been an outstanding start to the new season and we have big games ahead," he said. "I'm a little bit surprised but very happy. We have to carry on." The goalkeeper was particularly impressed with the performance of his back four. The trio of Philipp Lahm, Mats Hummels and Jérôme Boateng looked very assured on their return to the starting XI. "Of course it was a great night," he said. "On the whole, I think we were a very solid defensive team. "I think our back four are still as good as they ever were and they're showing great consistency. It's very good." Thomas Müller was also pleased with the performance against Mainz. "We have really enjoyed our win over Mainz and we had a very good game," he said. "We were very successful in our pressing, especially against Mainz. Mainz have a very good team who are a top side, but we managed to press and play good football." Juventus, Spurs and Real Madrid all arrive at the Allianz Arena on Sunday for a four-day stretch of Bayern fixtures, so the new manager must ensure his men get all the rest they need.
