Every player makes hundreds of

decisions throughout a soccer match, but it's what those decisions look like that has the biggest impact on the action of the game. "Players have a vast amount of potential that, with our technology, they are able to capture. We're able to track all of their movements and we're able to capture all of that data," explained Fifa 22 Serial Key technical producer Matt Booth, who has been involved with the development of the game since it was first announced back in 2016. "And then we use that data to power gameplay, so we're able to capture all that data and create gameplay that's more immersive and more authentic." The data collection process begins with the players testing out the new HyperMotion technology at a FIFA proving ground that consists of a high intensity

training session in a real-life venue with live participants. “The proving ground consists of a high intensity training session,” explains Booth.

“It’s like a full-scale game. It’s a completely different environment compared to what it’s going to be like at the stadiums. We capture all of the data and we use that to create the game.” The data collected by the new HyperMotion technology consists of many different categories, the most important being player movements. “The huge thing is player movements,” says Booth. “We capture all of the player movements for every player and then use that to power gameplay.” If that wasn’t already exciting enough, Booth adds, “We’ve also got ball movement, we’ve got ball tracking, so we’ve tracked every single aspect of the

game.” Player movements in FIFA 22 are key to how the game is played. “If you take player movements, they’re incredibly important,” explains Booth. “If you look at player movements in FIFA 22, if a player moves, it’s an important event that has an impact on gameplay, and that impacts the overall outcome of a match. So the key thing is player movements, making sure the players are in the right place at the right time to make decisions. We capture that data and that data is used by gameplay.” In addition to capturing player movements and ball tracking, Booth explains, “We’re capturing all the variables in the environment. We capture the distance that

FIFA is a brand-new version of the FIFA video game series, one that gives fans everything they want from a football game and adds more than 150 features and improvements designed to enable the game to better reflect real-life football. FIFA's revolutionary engine is the defining factor in the series' legacy. It uses a modernized version of its proprietary Creation Engine to accurately simulate accurate physical movement and reaction in every player in every match to provide players with a more realistic feeling of mastery on the field. The team-based gameplay with more than 350 players and

managers has been significantly enhanced to make the long hours of gameplay even more rewarding. Within the single player, Free Kick Evolution lets players practice their free kicks from any location on the field to perfect their timing and placement. Six game types have also been expanded and reworked to be even more fun. A new feature called "Press the Shuffle" has been added to the career mode for the first time. Over three seasons, the player can now progress through his or her entire career with any team in any league in the world. The new challenge for players is to be the best player in a career that can last up to 100 years. This time, the developers have

added a new Club Experience feature to the franchise mode.

FIFA's historical and cultural atmosphere has been maintained and players can now witness various moments in football history that happened in the year they were released. For the first time, players can now dominate the midfield in a 5-on-5 game.
